

Opportunity LOL Reviews: The Magic School Bus, Blasting Off with Erupting Volcanoes

Are you ready to be a part of Ms. Frizzle's class again? Join the gang from Magic School Bus in the all new for 2011 Young Scientists Club Kits. Designed by parents and educators these kits are educational and engaging for your child. The sooner you expose your children to the world of science the better off they will be in the long run, in fact these Young Scientist Kits are actually made for a child as young as 5 years old! There are quite a few kits in the series including: Jumping into Electricity and Blasting Off with Erupting Volcanoes!

What better way to learn about the layers of the Earth than with The Magic School Bus? Your child will dive into the role of a volcanologist right alongside Ms. Frizzle. From making real pumice float to exploding a volcano, this kit is way more engaging than your children's science book from school. This kit is particularly helpful to those children that are visual learners! Two thumbs up for the fun

pictures and stickers. Be prepared, your children are going to be begging you to buy more science kits in the future!

The Young Scientists Club was started as a summer camp by Esther Novis, a mother of 5. A Harvard-trained biologist who's brilliance has allowed for hundreds of children to enjoy science at home. This year marks The Magic School Bus's 25 year anniversary. Does anyone else suddenly feel old? With over 58 million books in print The Magic School Bus is a cultural icon that has clearly stood the test of time! You can purchase the kits online from Kids Science Kits. Happy shopping!
