

## Spotlight on

Some topics never fail to intrigue even the littlest of scientists. Hot on the science toy shelf this year are classic categories such as dinosaurs, bugs, and gardening, plus more complex topics like circuits, polymers, decomposition, and much more.

Seatbelts, everyone! Kids ages 5 and older can join Ms. Frizzle and her students as they explore the field of chemistry. **The Magic School Bus Chemistry Lab** by **THE YOUNG SCIENTISTS CLUB**, shaped like the famous bus, features the tools needed for the 51 included experiments, plus a data notebook to record observations. Young scientists can make sticky ice, use litmus paper, measure pH, perform chromatography, make bubble sculptures, wake up fungus, create slime, produce a milk rainbow, and much more.
