Seatbelts, everyone! Celebrating 25 years of educational exploration, the Magic School Bus series is back with a new line of science lab kits. Available now, the Magic School Bus Microscope Kit teaches kids how to make and examine slides of water droplets, plant parts, textile fibers, paper and crystals and comes with all the tools a scientist-in-training might require: a microscope, blank slides, cover slips, tweezers, vials, experiment cards, prepared slides — even a notebook to record your scientific data.
